

Scope of Work (SOW)

Inventory Management & Stock Movement System

Prepared for Disposal Product Manufacturing & Trading Operations

1. Project Overview

The proposed system is a centralized Inventory Management and Stock Movement Application designed for a business dealing in manufacturing and trading of disposal products across multiple warehouse locations.

The client currently operates through two warehouse locations:

- Vasai Warehouse
- Goregaon Warehouse

The business handles:

- Self-manufactured products
- Finished goods purchased from different companies/brands

The system will help the client manage:

- Stock In entries
- Stock Out entries
- Warehouse-wise inventory
- Brand-wise and product-wise tracking
- Sales movement
- Inventory synchronization through manually imported Tally sales reports

The application will provide controlled access for warehouse users and an Admin Panel for centralized monitoring and inventory management.

2. Objectives

The objective of the system is to:

- Digitize inventory movement processes
 - Maintain accurate warehouse-wise stock records
 - Track inward and outward movement of products
 - Maintain brand-wise and product-wise inventory
 - Reduce manual stock calculation errors
 - Synchronize inventory through manually uploaded Tally sales data
 - Generate inventory and sales movement reports
-

3. System Modules

A. Login & User Management Module

User Roles

1. Admin

- Full access to the system
- Can manage products, brands, warehouses, and inventory
- Can view all stock movements
- Can import Tally reports
- Can generate reports

2. Vasai Warehouse User

- Access limited to Vasai warehouse operations
- Can perform Stock In and Stock Out entries

3. Goregaon Warehouse User

- Access limited to Goregaon warehouse operations
 - Can perform Stock In and Stock Out entries
-

4. Warehouse Management

Admin will be able to:

- Create and manage warehouse locations
- Assign warehouse-specific users
- Track inventory warehouse-wise

Initial warehouse setup:

- Vasai
- Goregaon

Future warehouse addition provision can be kept scalable.

5. Brand Management Module

Admin will be able to:

- Add Brand Names
- Edit Brand Names
- Deactivate Brands

Examples:

- Brand A
- Brand B
- Brand C

Brand selection will be mandatory during stock transactions.

6. Product Management Module

Admin will be able to:

- Add Products
- Edit Products
- Activate/Deactivate Products
- Map products with brands

Product Nomenclature

The inventory identification will primarily work on:

Product Name + Brand Name

Example:

- 200ml Glass + XYZ Brand
- Spoon Medium + ABC Brand

This combination will be treated as the unique inventory criteria across the system.

7. Stock In Module

Warehouse users will be able to perform Stock In operations.

Stock In Process Flow

Step 1:

Select Brand Name

Step 2:

Select Product Name mapped to the selected brand

Step 3:

Enter Quantity

Step 4:

Submit Stock In Entry

Stock In Data Captured

- Warehouse Name
- Brand Name
- Product Name
- Quantity

- Date & Time
 - Entry By User
-

8. Stock Out Module

Warehouse users will be able to perform Stock Out operations.

Stock Out Process Flow

Step 1:

Select Brand Name

Step 2:

Select Product Name

Step 3:

Enter Quantity

Step 4:

Select Dispatch Type

Two options will be available:

Option A:

Transfer to Goregaon Warehouse

Option B:

Direct Selling

9. Direct Selling Workflow

If “Direct Selling” is selected, the user must additionally enter:

- Client Name (Manual Entry)
 - Invoice Number (Manual Entry)
-

Stock Out Data Captured

- Warehouse Name
 - Brand Name
 - Product Name
 - Quantity
 - Dispatch Type
 - Client Name (if direct selling)
 - Invoice Number (if direct selling)
 - Date & Time
 - Entry By User
-

10. Inter-Warehouse Transfer Logic

When stock is transferred:

From Vasai to Goregaon:

- Stock will reduce from Vasai inventory
- Goregaon warehouse user will perform Stock In from Vasai stock
- Stock will increase in Goregaon inventory only after Goregaon performs the Stock In entry

The Goregaon warehouse will then continue selling/distributing the same inventory from its login.

11. Goregaon Warehouse Operations

The Goregaon login will have similar functionality:

- Stock In
- Stock Out

- Direct Selling
- Client Entry
- Invoice Number Entry

All transactions will remain warehouse-specific.

12. Inventory Management Module

Admin will have centralized access to:

- Current stock
 - Warehouse-wise stock
 - Brand-wise stock
 - Product-wise stock
 - Stock movement history
 - Transfer history
 - Sales records
-

13. Tally Sales Report Import Module

Purpose

The client currently maintains billing/sales in Tally.

There will be NO direct Tally integration or API integration included in the current scope.

The client will manually download/export sales reports from Tally in Excel format and upload/import the same report into the system.

To avoid duplicate manual entries and maintain inventory accuracy, the system will support importing manually exported sales reports from Tally.

Import Process

Step 1:

Client downloads/export sales report from Tally in Excel format

Step 2:

Admin uploads/imports the same report into the system

Step 3:

System validates:

- Product Name
- Brand Name

Step 4:

Matching inventory gets automatically updated

Inventory Update Criteria

Inventory synchronization will happen based on:

Product Name + Brand Name

This will be treated as the primary matching criteria during import.

14. Import Validation Logic

The system will:

- Validate duplicate entries
 - Highlight unmatched products
 - Show invalid product-brand combinations
 - Generate import success/failure summary
-

15. Reports Module

Admin will be able to generate and download reports including:

Inventory Reports

- Current Stock Report
- Warehouse-wise Inventory Report
- Brand-wise Inventory Report
- Product-wise Inventory Report

Stock Movement Reports

- Stock In Report
- Stock Out Report
- Inter-Warehouse Transfer Report

Sales Reports

- Client-wise Sales Report
 - Invoice-wise Sales Report
 - Brand-wise Sales Summary
-

16. Filters in Reports

Reports can be filtered using:

- Date Range
 - Warehouse
 - Brand
 - Product
 - Client Name
 - Invoice Number
-

17. Dashboard Module

Admin Dashboard may include:

- Total Inventory
 - Warehouse-wise Stock Summary
 - Recent Stock Movements
 - Low Stock Alerts
 - Recent Sales Entries
 - Transfer Summary
-

18. Audit & Tracking

The system will maintain logs for:

- Stock In entries
 - Stock Out entries
 - Inventory changes
 - Imported sales reports
 - User activities
-

19. Technology Scope

The solution may include:

- Web-based Admin Panel
 - Mobile Application for Warehouse Operations
 - Centralized Database
 - Role-based Login System
-

20. Deliverables

The project deliverables will include:

- Inventory Management Application
- Admin Panel

- Warehouse User Logins
 - Product & Brand Management
 - Tally Import Module
 - Reporting Module
 - Deployment Support
 - Basic User Training
-

21. Assumptions

- Tally export format will be shared by the client
 - Product naming convention in Tally must match the system nomenclature
 - Internet connectivity will be available at warehouse locations
 - Barcode integration is not included in current scope
 - Accounting functionality is not included in current scope
 - Sales Module is not included in current scope
 - Purchase Module is not included in current scope
 - No direct Tally API integration is included in current scope
-

25. Estimated Timeline

Phase	Timeline
Requirement Finalization & UI Approval	Week 1
Development Phase	Week 2 to Week 5
Testing & UAT	Week 6

Deployment & Training

Week 6
